Encapsulation Sheet

Cap Sheet
(for Capsule Tops. Indentations vs. holes)

Middle Sheet
(has holes that go through)

Tamper
(Screw Handles to Tamper)

Powder Guard

Spreader

Do not place in dishwasher
Manual Capsule Filler Directions for use for models CN-50, CN-100, CN-240, CN-400 and CN-800

1. Place the Encapsulation Sheet on top of the Body Sheet. Place capsule bodies and caps into separate bowls. Pour capsule bodies into the Encapsulation Sheet, shaking gently as they fall into place into the Body Sheet. Pour off excess capsules and remove Encapsulation Sheet.

2. Now place the Encapsulation Sheet on top of the Cap Sheet, and repeat the process with the capsules tops. Set these two sheets aside and remove the Encapsulation Sheet.

3. Place the Powder Guard on top of the Body Sheet, fill the bodies with powder, and use the Spreader to evenly spread the powder.

4. Use the Tamping Tool to press the powder into the bodies, repeating step # if necessary.

5. Place the Middle Sheet over the Cap Sheet containing the capsule tops, flip over, then lay both on top of the Body Sheet.

6. Press downwards with even pressure on top of the assembled sheets to join the capsules. Do not press too hard or you may break the capsules.

7. Remove the top two sheets, exposing the finished capsules and gently remove them from the capsule filler. You may wish to manually “snap” the capsules together gently to ensure that they are completely sealed.
